

SERVICE BRIEF

Cloud IT Solutions

Eliminate expensive start-up costs and IT management overhead with enterprise-level cloud solutions.

Welcome to the Cloud

Cloud IT is the future of small and medium business technology management that greatly reduces the cost of setup and management.

The cloud is here. Imagine being able to expand your company's capabilities without needing to purchase expensive hardware or worry about running and maintaining it in your office. With the cloud, it is possible to get the benefits of a secure, expertly managed data center without the costs required to purchase and run your own equipment.

All of your servers and solutions would be housed within Quest Digital's data center, greatly reducing the cost of management and maintenance.

Hosted, Virtualized Cloud Servers

With Quest Digital Cloud Servers, we can deploy, manage, and fully support your company's server environment in our own data center.

Running a business used to require expensive server equipment that needed to be replaced every few years. With the Quest Digital Cloud, your server is housed securely and maintained by our experienced technicians and engineers. We utilize virtualized server environments that allow for higher hardware utilization and vastly less resource and energy demand, keeping our costs low and our service environmentally friendly.

Internally, your users will be able to access files and applications hosted on your virtual servers as if they were physically at your location.

Quest Digital employs the highest standards of IT management in our data center to ensure optimal uptime and data protection and continuity so you and your staff can focus on your business and not your IT.
